Homework 1

Don't forget an academic integrity statement (see syllabus for more details)!

1. If a researcher is conducting a paired experiment with exactly 12 participants, how many possible assignment combinations must be evaluated to compute the exact randomization test?
2. Using your own words, explain the primary advantages and disadvantages of a randomization test for performing inference compared to a standard parametric t -test.
3. (Textbook, first edition) **Exercise 2.3**
4. (Textbook, first edition) **Exercise 2.1**
 - [5200] Instead of a randomization test, perform a two-sample t test.
 - [6200] Perform both a randomization test and a two-sample t test.
